03 - 05 - 2025

# PROJECT OVERVIEW

Create an interactive and dynamic dashboard in Excel using the McDonald's sales dataset to analyze various aspects of sales performance, item popularity, customer preferences, and time-based trends. The dashboard should provide actionable insights and allow for easy data exploration.

# Mc Donald's Sales Analysis

## Total Sales Revenue by Category.

The total revenue generated from all menu items is **\$61,626.29**. The top revenue-driving categories are:

- Burger – \$21,639.01
- Chicken – \$12,393.50
- Pasta – \$9,223.05
- Sandwich – \$8,241.95
- Sides – \$2,876.98

These five alone contribute **88%** of the overall revenue.

## Total Orders Placed by Time of Day.

The peak order volumes occur during lunch (**Afternoon**) and early dinner hours (**Evening**).

- **12 PM** saw the highest with **1,672** orders, followed by
- **1 PM** with 1,575 orders and
- **5 PM** with **1,370** orders.

Low volumes were recorded at **10 AM (5 orders)** and **11 PM (11 orders)**, confirming that mid-day is the most active period.

## Most Frequently Ordered Item

- While **Side Salad** has the highest number of individual orders (**631**), **burgers** lead in revenue, suggesting a strong demand for high-value items.

## Revenue Over Time

Revenue trends over three months show a slight upward movement:

- January: \$20,824.72
- February: \$19,678.55
- March: \$21,123.02

**Burger, Chicken, and Pasta** categories consistently perform well, while smaller categories remain stable but contribute less.

## Average Number of Items per Order

The average number of items per order is around **2.28** based on total revenue and item pricing. This provides a solid baseline for forecasting inventory and staffing needs.

## Weekday vs. Weekend Sales

- Weekend average item price: \$5.05
- Weekday average item price: \$5.03

While the difference is minimal, weekends show slightly higher per-item revenue, indicating larger or more premium purchases.

## Category Sales Performance Over Months

- Top-performing items—**Burger**, **Chicken**, and **Pasta**—have remained stable month-to-month, highlighting customer preference consistency.
- Lower-tier categories like **Wraps** and **Salads** continue to generate modest but reliable revenues.

## Customer behavior Analysis

- **Core Items Dominate:** Burgers, Chicken, and Pasta contribute over 70% of total revenue, showing strong customer preference.
- **Meal-Time Orders:** Orders peak during lunch (12–1 PM) and early dinner (5 PM), aligning with standard eating hours.
- **Weekend Behavior:** Average item prices are slightly higher on weekends, indicating a shift toward premium purchases.
- **Occasion-Based Choices:** Breakfast spikes on Jan 1; Chocolate sees high demand on Feb 14 evenings.
- **Item-Time Trends:** Big Mac is preferred in afternoons, while Side Salad sees more orders in the evening.

## Key Takeaways:

- Concentrate **promotions and staffing** around **midday** and **evening** hours to match peak demand.
- **Burgers** dominate in both **sales** and **popularity**—bundle offers or loyalty rewards could increase value.
- Revenue is steady with signs of gradual growth; underperforming categories offer potential for optimization.
- Weekends show slightly higher item value, suggesting an opportunity for **special weekend menus or upsells**.
